**Ubiquinone**

- It is also called coenzyme Q<sub>10</sub> or Q.
- It is a lipid-soluble benzoquinone with a long isoprenoid side chain.
- Ubiquinone can accept
  - One electron to become the semiquinone radical (Q<sup>•</sup>) or
  - Two electrons to form ubiquinol (QH<sub>2</sub>).
  - It can act as the pincer between a two-electron donor and a one-electron acceptor.
- Ubiquinone is small and hydrophobic. It is freely diffusible within the lipid bilayer of the inner mitochondrial membrane and can shuttle reducing equivalents between other, less mobile electron carriers in the membrane.
- Ubiquinone carries both electrons and protons. It plays a central role in coupling electron flow to proton pumping.

## To whom it may concern

This is to certify that Mr. Debanil Dhar is known to me since he joined my laboratory in September 2021, as a research intern in a project titled "Deciphering the role of CUEDC2 in the molecular cross-talk between aneuploidy and receptor status in breast cancer". Since his joining this division, I have always noticed his involvement and patience in understanding scientific nuances. Coming from a Microbiology background, he indeed worked hard to make himself competent in the field of Cancer Cell and Molecular Biology. With times, he received hands-on training in RNA isolation, cDNA preparation, qualitative and quantitative PCR, agarose gel electrophoresis, SDS-PAGE and fluorescence-*in-situ*-hybridization. Indeed, his involvement is nothing less than that of a PhD student. Moreover, he is hard-working and spends long hours in the laboratory including the holidays. I found Debanil as an enthusiastic student who always strives for new knowledge. In my opinion, he promises to be an excellent researcher in his field in the coming years. I strongly recommend him for the candidature for the Research Fellowship Award from DSTBT.
